Effect On The Consumer

In This Section: [Benzene In Soft Drinks](#) | [Background Data On Benzene Soda Study](#) | [Data On Benzene Soda Study](#) | [Effect On The Consumer](#) | [Benzene Levels In Drink Product Samples -Table 1:A](#) | [Benzene Levels In Drink Product Samples -Table 1:B](#)

Effects of the Soda Study on the Consumer

They cannot yet understand the sources of variation in measured benzene levels, such as variability between different product lots and the effects of storage and handling.

Although one sample from a production lot may contain elevated benzene levels, it does not mean that all the products from that lot will have elevated levels, or that all lots of a given product will contain elevated levels.

We will continue to collect and analyze samples and to work with industry to better understand the sources of variability.

We believe that appropriate steps currently are being taken by industry as well as FDA to make sure that benzene formation in beverages is minimized to levels below the drinking water standard of 5 ppb.

The FDA has followed up with companies whose samples of products were found to contain elevated levels of benzene in CFSAN's recent survey.

The FDA will continue to follow up with manufacturers as survey results warrant. Manufacturers either have reformulated or are reformulating products that have been identified as containing greater than 5 ppb benzene.

CFSAN tested a few of the reformulated products provided by the manufacturers and found that benzene levels were less than 1 ppb.

If you or your family's health has been compromised, or if your property and/or surrounding environments have been contaminated by Benzene, you can file a Benzene lawsuit to fight back against the

\$53 million verdict — brake mechanic suffering from mesothelioma

\$13.5 million verdict — one of the very first Vioxx trial cases

\$15 million settlement — man wound up a paraplegic due to negligent hospital care

\$37 million verdict — 2 asbestos lung cancer plaintiffs
